Castello d'Argile 22/03/2013

As general director of F.B. Group I am pleased to inform you that our production department has recently completed an important acquisition.

During the month of January has been realized the incorporation of a major Italian production unit, particularly modern, highly automated and equipped with technologies of recent generation.

The operation ended with the transfer of the whole plant at our unit in Castello d'Argile.

In these weeks the technical staff works assiduously in order to install all new turning lines acquired, which are divided into three subgroups of different technology: multi-spindles, transfer, CNC machines.

The full implementation of all the new lines will increase approximately 150% of the current production capacity.

This important step, supported by the difficult contingent moment, will allow our group to face the market with greater force and solidity to support customers that with great fidelity work daily at our side.

Best regards,

Davide Facondini

General Director
